Möbius function in function fields

Abstract: Finding the precise upper and lower bounds of $M(x)$, which is defined by

$$M(x) = \sum_{n \leq x} \mu(n);$$

is a difficult problem in analytic number theory. We look at this problem in the function field context and describe some connections with random matrix theory and the Deligne-Katz equidistribution theorem.

Wednesday, July 15, 2015
2:40-4:00PM

Bryn Mawr College
Department of Mathematics
Park Science Center 328

Tea and refreshments at 2:20PM in Park 355
